SUMMARY

Software Engineer with 3+ years of experience building scalable backend systems and distributed microservices. Have worked across the full lifecycle of production services, from designing event-driven pipelines with RabbitMQ and Debezium to deploying containerized workloads on AWS ECS.

SKILLS

Languages: Java, JavaScript, Python, SQL, Shell Script

Backend: Spring Boot, WebSockets, RESTful HTTP APIs, Microservices, RabbitMQ, Debezium

Frontend: ReactJS, Redux, React Router, Ant Design, Material UI

Databases: MySQL, PostgreSQL, MongoDB, Elasticsearch, Redis

Cloud & DevOps: AWS (EC2, ECS, RDS, S3, CloudWatch, SQS, API Gateway, VPC, OpenSearch, Lightsail), Docker, Nginx, Terraform

EXPERIENCE

Zeus Learning

Jan 2023 – present

Sr. Software Engineer

Mumbai

- Developed modular, containerized microservices for LMS/CMS platforms using Docker and clean architecture principles, enabling independent service deployments orchestrated via AWS ECS with fully automated CI/CD pipelines on AWS CodePipeline.
- Engineered scalable background job processing pipelines using RabbitMQ and worker services, resulting in a **70% increase** in throughput and responsiveness.
- Architected and implemented a CDC pipeline using Debezium and RabbitMQ – evaluated connector strategies, designed the event routing topology, and led the rollout – resulting in a real-time reporting microservice that improved performance by **80%** and fully offloaded analytics from the primary database.
- Drove the decision to adopt Elasticsearch for content listing after benchmarking it against native DB queries – designed the index mapping, sync strategy, and query layer – reducing listing latency by **90%**.
- Contributed to publishing internal npm packages consolidating reusable UI components and shared business logic, driving adoption across 4+ micro frontends – eliminating significant code duplication and improving long-term maintainability across the frontend ecosystem.
- Collaborated with Product, QA, and DevOps teams to deliver scalable, observable microservices using AWS (EC2, ECS, RDS, S3, CloudWatch) and Docker, following modern distributed systems best practices.

PROJECTS

Mendikot - Multiplayer Card Game | *Java Spring Boot, React, WebSocket*

- Developed a turn-based multiplayer card game with real-time synchronization.
- Implemented game sessions with unique IDs, custom decks, and multi/single-player modes.
- Used WebSockets for live communication of player actions and game state updates.
- Ensured server-side validation and state management for consistent gameplay.

Quick Bill | *Java Spring Boot, React* | [Web app](#), [Github](#)

- Developed a billing system to manage customers, products, and order creation.
- Generated downloadable PDF invoices for each order.
- Built a dashboard to track payments, order status, and revenue insights.

Costing Master | *Flutter, Firebase* | [PlayStore](#)

- Built a mobile app that handles end-to-end costing for saree manufacturers – replacing error-prone manual calculations that used to take significant time and effort.
- Captured detailed inputs including diamonds, heat press cost, labor charges, and profit margins.
- Generated precise cost breakdowns for each stage of production.
- Enabled export of detailed costing reports as images for easy sharing.

EDUCATION

Birla Vishvakarma Mahavidyalaya

Bachelor of Computer Engineering (CGPA: 8.2 / 10)

Jul 2019 - May 2023

Anand, Gujarat
